

1. router是个插件，做了什么事
2. 在根实例，挂载了一下router，为什么
3. router-view router-link为啥可以直接用

kvue-router

1. KVueRouter

1. 插件 install

1. Vue.prototype.\$router
2. 声明全局组件router-view router-link
 1. router-view: this.\$router.current => component => h(component)
 2. Router-link: h('a', {attrs:{href:'#'+this.to}}, this.\$slots.default)

2. VueRouter逻辑

1. url监听: window.addL...('hashchang',...)
2. Current: Vue.defineReactive(this, 'current', '/')

kvuex

1. Store

1. 保存选项: *mutations, _actions, getters*
2. 响应式状态: new Vue({data: {\$\$state: options.state}})
3. Get state()/set state()
4. Commit(): entry => entry(this.state)
5. dispatch(): entry => entry(this)

2. Install

1. Vue.prototype.\$store
